

NEW

Anlin ULite™ Thin Triple Glass

A new standard in energy efficient technology.

Meets Energy Star 7.0 Efficiency Standards

Designed to meet stringent ENERGY STAR 7.0* specifications, an update to EPA standards that increases performance requirements like insulation effectiveness and solar heat gain.

** Official Energy Star performance results pending testing*

Excellent Durability

Provides protection against moisture damage with a 6-7X lower condensation risk² and 3X more scratch resistance.

Better Thermal Performance

Increases thermal performance for better year-round comfort and hundreds of dollars in annual energy savings¹.

Easy Installation

Adds minimal weight³ for easier handling and smoother installation process, so there's less potential for damage.

¹ Calculated for average glazing surface of 434 sq. ft. for a home and \$0.13/kWh in comparison to double pane. ² Corning thermal modeling shows more than 130 days/year of condensation in Minneapolis with DGU with room facing coating as opposed to 20 day ULite™. ³ Versus double pane glass

ULite™ Thin Triple Glass

A New Standard in Energy Efficient Technology.

A leader in high-performance glass technology, engineers quality products trusted by homeowners and building professionals. Our durably built to boost your home's energy performance, now features ULite, a revolutionary glass technology innovation that sets a new standard in efficiency for windows.

Made To Perform In Your Climate Zone

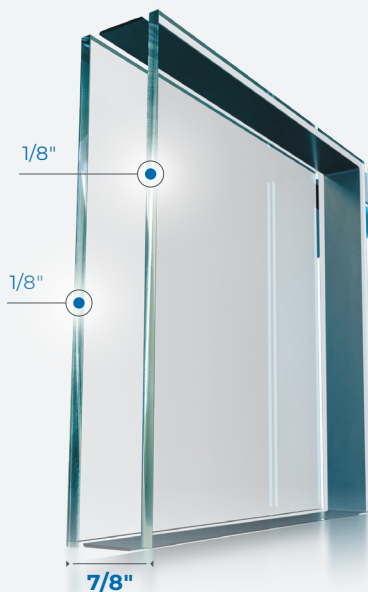

Anlin ULite Thin Triple Glass technology is designed to meet Energy Star Version 7.0* ratings. Ask your dealer for more information about your zone.
